### pH Charts

Soil pH measures the acidity or alkalinity of your soil. For most plants the optimum pH ranges is from 5.5 to 7.0, but some plants require a more acidic or alkaline soil. The pH scale goes from 0.0 to 14.0 with 0.0 being the most acidic and 14.0 the most alkaline. A pH soil test will tell you what pH range your soil is in.

pH ranges listed in these charts are approximate for the plant species. Different varieties of a plant could vary in their pH requirements. You should consider the pH a nursery or seed supplier recommends over the pH listed here if it differs.

This list doesn't include all plant species and is not meant to be a recommendation for planting the species listed.
